SUMMARY

Software Engineer with nearly four years of experience delivering scalable solutions across health, education, and enterprise platforms. Passionate about creating products that improve user experience and drive real-world impact. Currently focused on AI-driven projects, applying machine learning and intelligent automation to solve complex problems. Known for strong problem-solving skills, adaptability, and effective collaboration in cross-functional teams.

EDUCATION

Adelaide University (formerly The University of Adelaide)

Master of Computer Science

Adelaide, Australia

Jul 2024 - Jun 2026 (Expected)

Amrita Vishwa Vidyapeetham

Bachelor of Technology in Computer Science and Engineering

Coimbatore, India

Jul 2016 - Jun 2020

SKILLS

- **Certifications:** [Microsoft Certified: Azure Fundamentals](#), [Docker Foundations Professional Certificate](#)
- **Programming Languages:** Python, Java, JavaScript, PHP
- **Web Technologies:** HTML, CSS, Node.js, jQuery, React, Vue.js, Velocity
- **Frameworks & Libraries:** Laravel, Nuxt.js, Spring, Hibernate, Django, OpenCV, PyTorch
- **Databases:** MySQL, MongoDB
- **Cloud Technologies:** AWS S3, Docker, Jenkins
- **Tools & Platforms:** REST APIs, Jira, Git, SVN

EXPERIENCE

Allied AU - Software Engineer Intern

Jul 2025 - Oct 2025

- Enhanced core features of Allied AU healthcare platform, improving **email notification workflows (AWS SES)**, **Practitioner Calendar scheduling**, **Referrer-Client Bookings**, and **advanced search modules** to deliver a smoother experience for practitioners and clients.
- Resolved critical issues in **sign-up**, **booking**, and **NDIS workflows**, fixing navigation errors, placeholder logic, and validation conditions to improve onboarding efficiency and platform accessibility.
- Contributed to **Sole Trader** and **business onboarding features**, implementing practitioner availability management, calendar integration, and UI/UX consistency improvements to streamline practitioner operations.
- Diagnosed and resolved **frontend (Nuxt.js)** and **backend (Laravel) issues**, collaborating with QA and DevOps teams to support CI/CD pipelines, staging deployments, and reliable release cycles.
- Participated in **bug triage**, **staging validation**, and **release readiness reviews**, helping prioritise high-impact issues and support timely delivery of platform features aligned with business and regulatory requirements.

LinkedIn - Software Engineer/Contingent Worker

Jul 2022 - Jun 2024

- Developed a **QR code watermarking system** using JavaScript and jQuery that embeds user-specific identifiers on test pages to deter cheating, reducing reported policy violations by **50%**.
- Built and enhanced **custom checkout** and **invoice workflows** for the Trailhead Academy LMS using **Java**, **JavaScript APIs**, and **CyberSource**, including coupon handling, validation logic, and automated purchase/refund processing to improve transaction reliability and revenue tracking.
- Implemented **advanced course filtering functionality** supporting multi-value and comma-separated filters, along with empty-value handling, significantly improving search flexibility and course discoverability for users.

- Designed backend utilities, REST APIs, and microservice-style modules to **manage custom objects, user data deletion, and bulk data exports**, enabling secure customer offboarding and improving internal operational efficiency through automated export scripts and optimised system workflows.
- Improved system performance and reliability by **debugging runtime query logs, optimising backend methods, and implementing subscription validation logic** (event capacity checks, waitlist support), ensuring accurate enrolment and event management.

EduBrite Systems, Inc. (now part of LinkedIn) - Full Stack Developer

Oct 2020 - Jun 2022

- Developed and enhanced **custom LMS web modules** for enterprise clients, including Salesforce and VMware, using Java, Spring, Hibernate, Velocity, JavaScript, HTML, and CSS, improving platform functionality and the user learning experience.
- Designed and implemented a **Java-based email service framework** supporting personalised emails, reusable templates, default template helpers, and enum-based configuration for automated notifications across multiple platform workflows.
- Optimised **MySQL database queries and schema structures**, reducing query execution time by **30%** and improving system responsiveness for high-volume platform usage.
- Implemented new **learning management features**, including lesson bookmarking, learner attendance tracking for Salesforce training programs, cart item enhancements, and event grouping by location to improve course organisation and learner navigation.
- Improved platform reliability and maintainability by developing **backend helper methods, filtering utilities, DocuSign invoice integration, bug fixes, and codebase cleanup**, while supporting testing and feature enhancements across multiple modules.

ICU Medical India LLP - Python Developer Intern

Feb 2020 - Jun 2020

- Developed **Python-based automated test suites** using **Pytest** to validate critical functionalities of the Plum 360 Smart Infusion Pump, improving reliability of safety-critical medical software used in clinical environments.
- Automated **70+ functional test cases** covering infusion pump features such as bolus delivery, multi-step infusion, delayed start, piggyback therapy, flush operations, and alarm handling to ensure accurate medication delivery scenarios.
- Designed comprehensive **test scenarios for both nominal and edge cases**, validating **communication APIs, UI widget interactions**, and therapy programming workflows within a **Linux-based testing environment**.
- Increased **automated test coverage** from **58%** to **90%** by implementing scalable Pytest modules, improving defect detection and strengthening product safety and regulatory compliance for medical devices.

PROJECTS

- [**Flappy Bird Agent \(Deep Q-Learning\)**](#): Developed a reinforcement learning agent using **Deep Q-Networks (DQN)** to play Flappy Bird, incorporating **frame stacking, reward shaping, and epsilon decay** to improve training stability and achieve higher scores.
- [**OpenSeadragon \(Open-source Contributor\)**](#): Contributed to the **OpenSeadragon** open-source image viewer by enhancing **zoom control APIs**, and **DOM event handling**, with multiple PRs merged into the core project.
- [**Regex Pattern Matching Using LLMs**](#): Built a **Django + React** web application that converts **natural language queries into regex patterns using LLMs**, enabling automated text detection and replacement in CSV/Excel datasets for use in data cleaning and preprocessing pipelines.
- [**Video Face Detection**](#): Developed a computer vision pipeline using **OpenCV, MTCNN (PyTorch)**, and **DeepFace** to detect faces in videos, estimate age, and apply selective blurring for privacy protection.
- [**LiveWell – Elderly Care Companion**](#): Built a mobile companion app featuring **geofencing safety alerts, accelerometer-based fall detection, and a Llama-powered chatbot assistant** for personalised support and caregiver notifications.
