SUMMARY

Software Engineer with nearly four years of experience building scalable systems across health, education, and enterprise platforms. Passionate about creating products that improve user experiences, with focus on AI-driven techniques for complex problems. Currently exploring machine learning, NLP, and LLM-based program analysis to tackle challenges. Known for strong problem-solving skills, adaptability, and effective collaboration in cross-functional teams.

EDUCATION

The University of Adelaide	Adelaide, Australia
Master of Computer Science	Jul 2024 - Present (Expected Jul 2026)
Amrita Vishwa Vidyapeetham	Coimbatore, India
Bachelor of Technology in Computer Science and Engineering	Jul 2016 - Jun 2020

SKILLS

- **Programming Languages:** Python, Java, JavaScript, PHP
- **Web Technologies:** HTML, CSS, Node.js, jQuery, React, Vue.js, Velocity
- **Frameworks & Libraries:** Laravel, Nuxt.js, Spring, Hibernate, Django, OpenCV, PyTorch
- **Databases:** MySQL, MongoDB
- **Cloud Technologies:** AWS S3, Docker, Jenkins
- **Tools & Platforms:** REST APIs, Jira, Git, SVN

EXPERIENCE

Allied AU	Adelaide, Australia
Software Engineer Intern	Jul 2025 - Oct 2025
● Enhanced and extended core features of Allied AU's health platform, delivering improvements across email notifications (AWS SES), Practitioner Calendar, Referrer Client Bookings, and advanced search modules, directly contributing to a smoother experience for both practitioners and clients. ● Resolved critical issues in sign-up, booking, and NDIS workflows, including navigation errors, placeholder conditions, and logic mismatches, which significantly improved onboarding efficiency, accessibility, and compliance across key user journeys. ● Contributed to the Sole Trader and business onboarding processes, implementing robust availability management, Practitioner Calendar integration, and multiple UI/UX consistency fixes that streamlined operations for practitioners. ● Partnered with cross-functional teams to diagnose and resolve frontend (Nuxt.js) and backend (Laravel) issues, while coordinating with QA to ensure stable, high-quality deployments and reliable release cycles. ● Actively participated in bug triage, staging validation, and release readiness reviews, helping prioritise urgent issues and ensuring timely delivery of features aligned with business and regulatory requirements.	
LinkedIn	India
Software Engineer/Contingent Worker	Jul 2022 - Jun 2024
● Developed and enhanced QR code functionality using jQuery libraries and integrated it with the test module to prevent cheating, resulting in a 50% reduction in reported misleading practices. ● Implemented a custom invoice and checkout flow for the Salesforce LMS project, Trailhead Academy, using Java, CyberSource, and JavaScript APIs with CSRF tokens, contributing to improved revenue tracking.	

- Designed an algorithm using Java and Elasticsearch to recommend the most relevant courses based on course priority to users, resulting in a **2x increase** in course purchases.
- Provided technical support for the Salesforce project, including developing scripts to export data for customer offboarding, showcasing **collaboration** and **adaptability** with cross-functional teams in meeting deadlines.

EduBrite Systems, Inc. (now part of LinkedIn)

India

Full Stack Developer

Oct 2020 - Jun 2022

- Developed custom web pages for **Salesforce** and **VMware** using Java, Velocity, Spring, Hibernate, JavaScript, HTML, and CSS, aligning with the EduBrite LMS product and improving the learning platform.
- Designed and implemented an **email service algorithm** in Java for clients, enabling personalised emails and email templates for different actions across the platform.
- Optimised MySQL database queries and schema design to enhance the user experience, resulting in a **30% reduction** in query execution time.

ICU Medical India LLP

Chennai, India

Python Developer Intern

Feb 2020 - Jun 2020

- Automated testing for the **Plum 360 Smart Infusion Pump** using the Pytest framework, improving test reliability for critical clinical functionalities and error handling mechanisms.
- Designed and implemented detailed test scenarios and test cases covering both nominal and edge conditions, ensuring that all software modules, including **communication protocols** and **safety alerts**, were thoroughly verified.
- Increased code coverage from **58% to 90%**, significantly enhancing product safety and compliance.

Indian Institute of Technology (IIT)

Dhanbad, India

Research Intern

Apr 2019 - May 2019

- Conducted research at IIT (ISM) Dhanbad on **Wireless Sensor Networks**, designing an energy-efficient routing protocol using Embedded Routing and Oppositional **Grey Wolf Optimisation** for mobile sink positioning.
- Improved network lifetime and reduced energy use, validated via **NS2 simulations** and metrics like delay and throughput; published in Wireless Personal Communications (Springer).

PROJECTS

- **Flappy Bird Agent (Deep Q-Learning)**: Developed a reinforcement learning agent using Deep Q-Networks to play Flappy Bird. Incorporated frame stacking, reward shaping, and epsilon decay to improve learning speed and stability, enabling the agent to achieve consistently higher scores across episodes. Demonstrated expertise in **RL techniques and game-based AI experimentation**.
- **OpenSeadragon (Open Source Contributor)**: Contributed to the OpenSeadragon open-source image viewer by enhancing zoom control APIs, refining DOM event handling, and improving canvas logic for better performance and extensibility. Submitted multiple **PRs adopted into the core project**, showcasing the ability to work with large-scale, community-driven codebases.
- **Regex Pattern Match Using LLMs**: Built a full-stack Django-React web application that allows users to upload CSV/Excel files and detect/replace text patterns using **LLM-powered regex generation**. Designed the system to bridge natural language queries into executable regex patterns, improving accessibility for non-technical users in data cleaning workflows.
- **Video Face Detection**: Developed a computer vision tool with **OpenCV**, **PyTorch (MTCNN)**, and **DeepFace** to detect faces in videos, estimate age, and apply selective blurring to underage subjects. Combined detection and age-estimation pipelines to demonstrate practical applications in privacy protection and content moderation.
